STOP-IT V2

ABOUT STOP-IT !

A project called **STOP-IT** was initiated in 1998 by Leonardo Sedevcic.

In 2010 the Database created during years was used for **STOP-IT V1**,

The "extension" or "add-on" for browsers, **STOP-IT** BLOCKS access to any type of undesirable, hazardous, or unlawful information.

Today's most popular web browsers come equipped with security features like firewalls, antivirus software, and other tools to help you stay secure online, but **STOP-IT V2** goes above and beyond by instantly banning millions of illegal materials.

The built-in browser features can disable obtrusive pop-ups and track website requests, but they are unable to prevent malware downloads or block websites that try to use your microphone or webcam.

When you browse, **STOP-IT V2** hides your device and stops ad servers by obstructing cookies, scripts, and targeted advertising.

Unwanted software websites are websites that try to trick you into installing programs that damage your browsing experience, such as changing your home page or displaying additional ads on websites you visit.

STOP-IT V2 has a Phishing and malware protection that works by checking the page you visit for reported phishing messages.

HOW IT WORKS !

STOP-IT V2 Block I.P – URL – KEYWORDS – DOMAIN NAMES – MALWARES – SCAMS – RANSOMWARES - SCRIPTS

*** Only terms associated with adult websites are considered for the keywords match.

If you get the warning **Red Screen**, it indicates that the content you attempted to access contains keywords associated with websites that contain adults materials, a redirection to Google is provided when it happen!

These websites have been blocked to prevent access to them!

Similarly, websites containing harmful scripts that can harm your computer, such as Ransomware or Scams, are prevented from doing so by banning the websites containing those malicious scripts!

But **STOP-IT V2** also use a WHITELIST of Official Domain names to prevent those to be blocked and fall under the **Red Screen warning** !

The Whitelist of Domain names is updated by **STOP-IT V2** on a daily basis!
