

STOP-IT V2

WHY IT WORKS !

Only when users attempt to access an illicit website or an adult website that contains dangerous scripts or malware does the **STOP-IT V2** Red Screen warning appear!

The first attempt featured a redirection page, however visitors may view the automated redirection as abusive because it was overly forceful!

A Warning **Red Screen** is less severe; the user remains on the original website they attempted to view, but instead of seeing the page, they see a Red Warning notice that blocks them from seeing the content!

Malicious scripts that are triggered when a web page loads were also taken into account, rendering them ineffective and shielding the user from scams or viruses blocking their machine.

The intricacy of every search engine and Yandex photos & videos, with their dynamic page loading, made it extremely difficult to get this extension to function. Not only does **STOP-IT V2** function, but it also does so while protecting user privacy.

STOP-IT V2 DO NOT TRACK AND DO NOT KEEP ANY DATA!

Your surfing experience will significantly improve if you use **STOP-IT V2**.

After many years of upgrades, the V2 has finally arrived in 2025!

With a one-click feature, this extension is among the easiest to use right now!

I sincerely hope that users will find this extension useful. However, keep in mind that **password security for any browser extension cannot be enforced**; this is a precaution against users creating dangerous extensions!
